摘要 *Abstract*

本研究以 Cuofano《Enterprise Sales — Selling Outcomes in the AI Era》（2026）为分析底本，考察 AI 时代复杂销售的结构变化。研究的出发点是：**销售对象变了**——供应商不再出售席位与许可，而是出售在客户自己的案例上、按经验证标准完成并以结果计价的“已安装的结果”。本研究构建了以“风险不对称”与“工具取代断言”为核心的分析框架，并以底本的四条可证伪命题为假设，得出三项发现：其一，演示失去信息量，证明迁移至生产环境，成为一次限时、付费的部署；其二，买方“锁定意识”使采购、安全与法务审查更难，但主动提交所有权清单、模型可替换证明与移交测试的供应商可将其转为优势；其三，定价沿“归因 × 自主性”从席位向用量与结果迁移，账户经济性在扩张中实现，由净收入留存率衡量。案例部分重构了底本的保险业综合案例并归纳六类失败模式，讨论部分分析组织影响与证据局限，最后提出研究议程。

This study takes Cuofano's Enterprise Sales — Selling Outcomes in the AI Era (2026) as its source volume and asks how the complex enterprise sale changes in the AI era. Its premise is that **the object of the sale has changed**: vendors no longer sell seats and licences but an installed outcome — verified work on the customer's own cases, priced against the result. Framed by risk asymmetry and the replacement of assertion by instruments, and testing the source's four falsifiable claims, the study reports three findings. First, the demo has lost its information value; proof has migrated to production and become a paid, time-boxed deployment. Second, capture-aware buyers make the procurement, security and legal gauntlet harder, yet vendors who volunteer ownership schedules, model-swap evidence and handover tests can turn it into an advantage. Third, pricing migrates from seats toward usage and outcomes along the axes of attribution and autonomy, while account economics live in expansion, graded by net revenue retention. A case chapter rebuilds the source's insurer composite and classifies six failure families; the discussion covers organisational consequences and evidential limits, and a research agenda follows.

第 1 章 · CHAPTER 1

01 研究背景与问题提出

Background and Problem Statement

企业销售正在从根基处重建，而这场重建源于一个简单的事实：被出售的东西变了。

Enterprise sales is being rebuilt from its foundations, and the rebuild follows from one simple fact: what is being sold has changed.

中文

ENGLISH

1.1 销售对象的转变

A Change in the Object of the Sale

在过去四十年里，企业软件销售的标的物是席位、许可与平台。供应商交付工具，而把工具转化为业务价值的工作——以及其中的全部风险——由买方承担。底本认为，AI 周期颠倒了这一安排：领先供应商出售的是**已安装的结果**，即在客户自己的案例上、按照客户专家签字认可的标准完成的工作，并以结果本身作为计价依据。

For four decades the object of the enterprise software sale was the seat, the licence and the platform. The vendor delivered a tool, and the work of turning that tool into business value — with all of its risk — fell to the buyer. The source argues that the AI cycle inverts this arrangement: the leading vendors now sell an **installed outcome**, meaning work performed on the customer's own cases, to a standard the customer's expert has signed, and priced against the result itself.

对象一变，下游的一切随之改变：由谁来卖、什么算作证明、周期有多长、合同写什么、价格挂在什么上面。本研究关注的正是这一连锁反应。它不仅是销售技巧的更新，更是一种商业制度的改写——供应商与买方之间的风险分配方式发生了实质变化。

When the object changes, everything downstream changes with it: who sells, what counts as proof, how long the cycle runs, what the contract says and what the price is attached to. This chain reaction is the subject of this study. It is not merely an update to sales technique but a rewrite of a commercial institution, because the way risk is allocated between vendor and buyer has materially shifted.

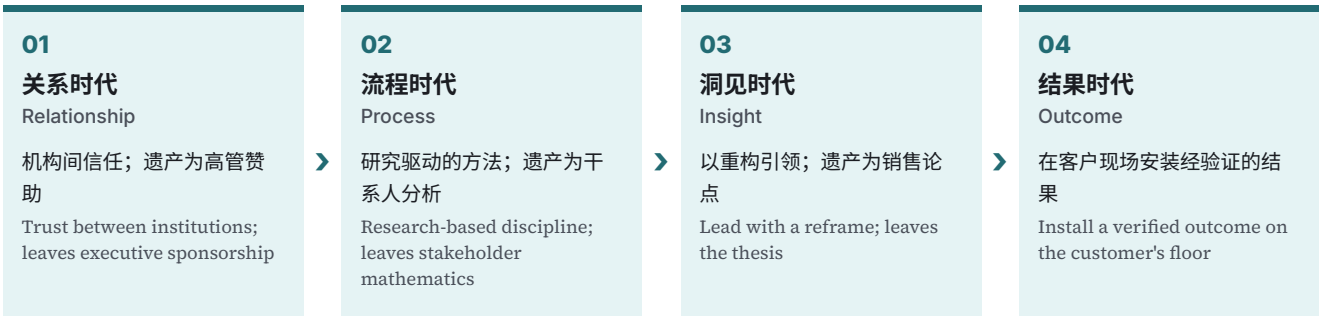

1.2 四个时代的沉积

Four Eras, Layered

底本把企业销售的演化概括为四个时代。每一次重建都留下了当前仍在使用的工具：关系时代留下了“采购首先是风险决策”的底色；流程时代留下了提问框架与资格审查清单；洞见时代留下了以“重构客户认知”为核心的论点式销售。第四个时代没有抛弃前三者，而是改变了位于中心的东西：不再是有待演示的产品，而是有待安装的结果。

The source describes the evolution of enterprise selling as four eras. Each rebuild left machinery that is still in use: the relationship era left the premise that buying is first a risk decision; the process era left questioning frameworks and qualification checklists; the insight era left the thesis-led pitch that reframes the customer's own business. The fourth era discards none of these, but changes what stands at the centre: no longer a product to demonstrate, but an outcome to install.

图 1-1 企业销售的四个时代及其遗产
Figure 1-1 *Four eras of the enterprise sale and what each left behind*

来源 Source: Cuofano (2026), Ch. I, synthesised by this study.

1.3 问题的提出
Framing the Problem

底本归纳了定义新销售形态的四个“反转”：演示失效、席位崩塌、买方具备锁定意识、销售者成为构建者。这些判断在实务界流传甚广，但很少被放在同一个分析框架下检验。本研究尝试追问：这些反转背后的共同机制是什么？它们分别作用于销售过程的哪个环节？哪些主张可以被证伪？

The source distils four inversions that define the new sale: the demo collapsed, the seat collapsed, the buyer became capture-aware, and the seller became a builder. These claims circulate widely among practitioners but are rarely examined within a single analytical frame. This study therefore asks: what common mechanism underlies the inversions, which stage of the sale does each act on, and which of the claims can be falsified?

第 2 章 · CHAPTER 2

02 核心概念与理论框架

Core Concepts and Analytical Framework

AI 改变了销售的对象，却没有改变企业采购的“物理定律”。本章先确立不变的结构，再引入变化的部分。

中文

AI changed the object of the sale, not the physics of enterprise buying. This chapter fixes the permanent structure first, then introduces what moves.

ENGLISH

2.1 不变的结构：五种语言与两种力量

The Permanent Structure: Five Languages, Two Forces

一笔有分量的企业采购需要一组角色分别说“是”，而每个角色使用不同的语言。经济决策者关心回收期；内部倡导者关心这笔交易对自身职业的影响；一线用户关心日常工作是变好还是变坏；采购关心价格、条款以及如今的依赖程度；安全与法务关心风险，并握有往往迟到的一票否决权。销售者的长期职责是**翻译**：把同一笔交易如实地讲成五种语言。

A consequential enterprise purchase needs a cast of roles to each say yes, and each speaks a different language. The economic buyer cares about payback; the champion about what the deal does to their career; users about whether their working week gets better or worse; procurement about price, terms and now dependency; security and legal about risk, with vetoes that tend to arrive late. The seller's permanent job is **translation**: one deal, told truthfully in five languages.

表 2-1 复杂销售中的五类干系人
Table 2-1 *The five stakeholder languages of the complex sale*

角色 Role	核心语言 Language	AI 时代所需的证据 Evidence needed in the AI era
经济决策者 Economic buyer	回收期 Payback	以买方自身单位计量的商业论证 A business case in the buyer's own units
内部倡导者 Champion	职业押注 Career bet	可自行转述的指标页 A gauge page that survives retelling
一线用户 Users	日常是否变好 Does the week improve	在自己案例上的表现 Performance on their own cases
采购 Procurement	价格、条款、依赖 Price, terms, dependency	所有权清单与退出路径 Ownership schedule and exit path
安全与法务 Security & legal	风险 Risk	数据留存与责任的结构性答案 Structural answers on data and liability

来源 Source: Cuofano (2026), Ch. II, VIII, XI; third column synthesised by this study.

支配复杂销售的有两种力量。第一是**风险不对称**：采购失败给买方带来的损失（职业、运营、审计）总是大于丢单给卖方带来的损失，因此企业天然倾向于说“不”、拖延或选择现有供应商。第二是**动员者问题**：交易更多死于惰性而非拒绝——无法达成一致的干系人群体会默认什么都不做。

Two forces govern every complex sale. The first is **risk asymmetry**: the buyer's downside from a failed purchase — career, operations, audit findings — always exceeds the seller's downside from a lost deal, so enterprises default to no, to delay and to the incumbent. The second is the **mobiliser problem**: deals die less from rejection than from inertia, because

a stakeholder group that cannot agree defaults to nothing.

2.2 变化的部分：四个反转
What Moves: The Four Inversions

图 2-1 定义 AI 时代销售的四个反转及其机制
Figure 2-1 *The four inversions of the AI-era sale and their mechanisms*

演示失效 Demo collapses	前沿模型天然演示出色，演示不再携带关于生产价值的信息	Frontier models demo well by construction, so demos carry no information about production value
席位崩塌 Seat collapses	智能体完成工作而非辅助工作，按人头定价与产品价值相冲突	Agents do the work rather than assist it, so per-head pricing fights the product's own value
买方警觉 Buyer turns capture-aware	采购像审计价格一样审计依赖，所有权问题提前到第二次会议	Procurement audits dependency like price; ownership questions arrive by the second meeting
卖者即建者 Seller becomes builder	证明即部署，能构建部署的人才能卖出部署	Proof is a deployment, so whoever can build one can sell one

来源 Source: Cuofano (2026), Introduction and Ch. IV.

2.3 分析框架：以工具取代断言
Framework: Instruments Replace Assertion

本研究把四个反转统一到一个命题下：传统销售框架是为了**管理**“价值是否会到来”的不确定性而建立的，而结果时代的工具试图直接**消除**这种不确定性。演示、ROI 声明、功能清单都属于断言；冻结的测试集、每周公开的指标页、所有权清单和移交测试则属于工具。底本在归纳失败模式时也得出同样的结论：几乎所有失败都源于销售的某个环节依赖断言，而时代要求的是工具。

This study unifies the four inversions under one proposition: the inherited frameworks were built to **manage** uncertainty about whether value would arrive, while the outcome era's instruments aim to **remove** it. Demos, ROI claims and feature checklists are assertions; a frozen test suite, a weekly published gauge page, an ownership schedule and a handover test are instruments. The source reaches the same conclusion from its failure cases: nearly every failure stems from some part of the sale running on assertion where the era demands an instrument.

概念界定 DEFINITION

关键术语 *Key terms*

冻结测试集：由买方专家签字、在证明期早期固定的一组已裁定案例，作为中立裁判。**指标页**：每周公开的生产表现读数。**所有权清单**：列明各项工件归属的合同附表。**楔子**：按评分卡选出的第一个工作流。

Frozen suite: a set of adjudicated cases signed by the buyer's expert and fixed early in the proof, serving as neutral referee. **Gauge page**: weekly published readings of production performance. **Ownership schedule**: a contract schedule stating who owns each artifact. **Wedge**: the first workflow, chosen on a scorecard.

第 3 章 · CHAPTER 3

03 研究设计与方法

Research Design and Method

本研究对底本进行结构化分析，以机制为编码单位，以底本自身的可证伪命题为研究假设。

中文

The study analyses the source volume in a structured way, coding by mechanism and adopting the source's own falsifiable claims as hypotheses.

ENGLISH

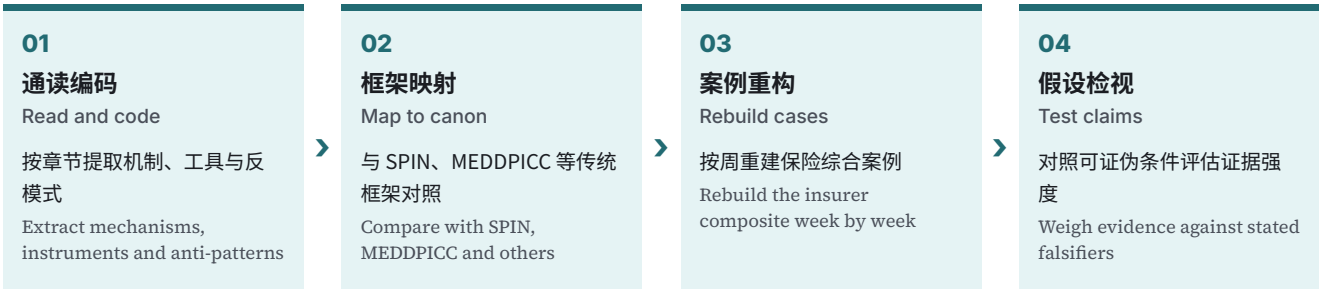

3.1 资料与分析单位

Material and Units of Analysis

分析底本为《Enterprise Sales》第一版，共二十四章及三个附录，分为基础、动作、定价与扩张、团队、五步行动与实践六个部分。本研究设定三个分析单位：**交易**（从客户选择到合同签署的单笔销售）、**账户**（包含首个部署与后续扩张的长期关系）、**团队**（承担销售与证明工作的组织单元）。底本附录 B 提供了标注于 2026 年第三季度的时点观察，附录 C 提供了一个从头到尾的综合案例。

The source is the first edition of Enterprise Sales: twenty-four chapters and three appendices across six parts — the ground, the motion, price and expansion, the team, the five moves and the practice. The study uses three units of analysis: the **deal** (a single sale from account selection to signature), the **account** (the long relationship spanning the first deployment and its expansion) and the **team** (the organisational unit that sells and proves). Appendix B supplies dated readings as of Q3 2026, and Appendix C supplies an end-to-end worked composite.

图 3-1 本研究的分析流程
Figure 3-1 *The analytical procedure of this study*

3.2 编码框架：传统方法的“重新布线”

Coding Frame: The Canon, Rewired

底本并未宣称传统销售方法已经过时，而是把它们视为“底层基质”。其中最便于对照的是 MEDDPICC 资格审查体系：底本认为它几乎可以逐字母映射到结果时代的工具上。本研究以这一映射作为编码框架，用来判断某一机制究竟是全新的，还是对既有工具的强化。

The source does not declare the sales canon obsolete; it treats it as substrate. The clearest comparison is the MEDDPICC qualification system, which the source argues maps almost letter by letter onto the outcome era's instruments. This study uses that mapping as its coding frame, to judge whether a given mechanism is genuinely new or a hardened version of an existing instrument.

表 3-1 MEDDPICC 要素与结果时代工具的对应
Table 3-1 *MEDDPICC elements mapped to outcome-era instruments*

传统要素 Canon element	结果时代工具 Outcome-era instrument	变化性质 Nature of change
指标 Metrics Metrics	指标页的公开读数 Published gauge readings	由声称变为测量 Claim becomes measurement
决策标准 Decision criteria	冻结测试集 Frozen suite	买方标准经签字固定 Buyer's standard, signed
决策流程 Decision process	双方行动计划 Mutual action plan	双方注明日期 Dated on both sides
文书流程 Paper process	第一周绘制的审查关卡图 Gauntlet mapped in week one	提前且并行 Earlier and concurrent
痛点识别 Identified pain	楔子评分门槛 Wedge gates, scored	由判断变为评分 Judgement becomes score
竞争 Competition	对角竞争者 Diagonal competitor	对手是替代方案组合 Rival is the alternative stack

来源 Source: Cuofano (2026), Ch. III; third column is this study's coding.

3.3 研究假设
Hypotheses

研究假设 HYPOTHESIS

来自底本附录 A 的四条可证伪命题 *Four falsifiable claims from the source's Appendix A*

H1 生产环境证明的转化率高于演示—概念验证—试点阶梯。H2 主动提交所有权清单可缩短采购周期。H3 以结果定价的账户，其留存与扩张高于按席位定价的账户。H4 以小组（pod）为单位的团队在证明转化率上优于以个人销售为单位的团队。

H1 Production proof converts better than the demo–proof-of-concept–pilot ladder. **H2** Volunteered ownership schedules shorten procurement cycles. **H3** Outcome-priced accounts retain and expand above seat-priced ones. **H4** Pod-structured teams outperform rep-structured teams on proof conversion.

第 4 章 · CHAPTER 4

04 发现一：证明迁移至生产环境

Finding 1: Proof Has Migrated to Production

证明是 AI 时代销售的中心，而关于它的核心事实是：证明已不再是一项销售活动，而是一次部署。

中文

Proof is the centre of the AI-era sale, and the central fact about it is that it is no longer a sales activity. It is a deployment.

ENGLISH

4.1 旧证明阶梯为何失效

Why the Old Proof Ladder Broke

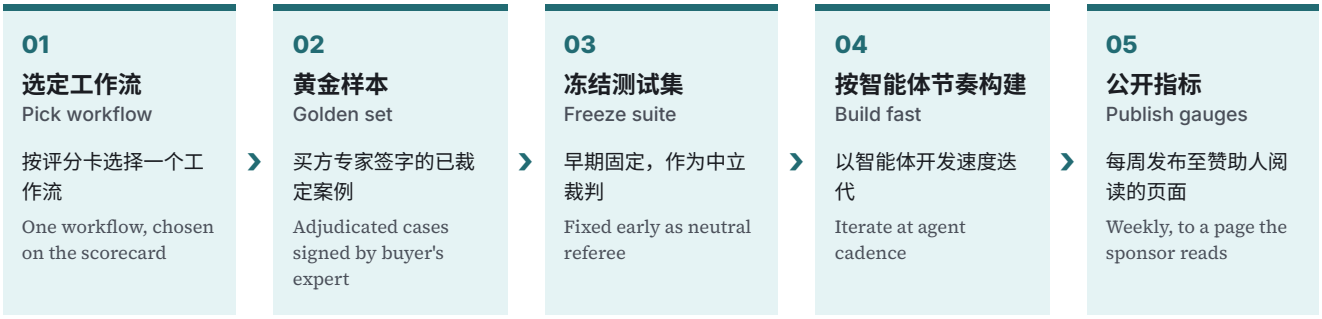

传统的证明阶梯依次是演示、概念验证和试点。底本指出，这三级在 AI 场景下都出现了结构性失效。演示不携带信息，因为前沿模型在十分钟内总能显得流畅而神奇；在精心整理的数据上做的概念验证，证明的只是数据整理的质量；开放式试点则是交易的坟场——没有冻结的标准、没有经验证的结果、没有预定的终点，并以固定的月度速率消耗倡导者的职业资本。

The traditional proof ladder runs from demo to proof of concept to pilot. The source shows that each rung fails structurally for AI. The demo carries no information, because a frontier model can look fluent and miraculous for ten minutes by construction. A proof of concept on curated data proves only the curation. And the open-ended pilot is where deals go to die: no frozen standard, no verified result, no scheduled end, and a purgatory that consumes the champion's career capital at a fixed monthly rate.

4.2 生产楔子：作为销售机器的部署

The Production Wedge: Deployment as Sales Machinery

图 4-1 生产楔子的五个环节
Figure 4-1 *The five steps of the production wedge*

来源 Source: Cuofano (2026), Ch. X and XX.

生产楔子的每个元素都具有双重功能。签字的测试集把买方专家从评估者变为共同作者；每周的指标页把指导委员会从听众变为记分牌的读者；三十天内取得首个验证成果的时限，把试点的开放式风险变为有界的押注；而带有日期与签字的“毕业”环节，则把证明转化为推动扩张的参考案例。底本还强调，证明应当**收费**：合理的固定费用可以筛掉不认真的买方、为现场团队提供资金，并为买方的投入定价——付了钱的买方会出席会议。

Every element of the production wedge does double duty. The signed suite turns the buyer's expert from evaluator into co-author; the weekly gauge page turns the steering committee from an audience into readers of a scoreboard; the thirty-day clock to a first verified win turns the pilot's open-ended risk into a bounded bet; and a dated, signed graduation turns the proof into the reference that sells expansion. The source also insists the proof is **sold, not given**: an honest fixed fee filters unserious buyers, funds the field team and

prices the buyer's commitment — a buyer who paid attends.

> **我们将在你的案例上、按你的专家的标准、在限定时间内证明它——而证明它的工具归你所有。**
>
> *We will prove it on your cases, against your expert's standard, on a clock — and you will own the instrument that proved it.*
>
> — Cuofano, Enterprise Sales (2026), Ch. X

4.3 倡导者与商业论证：证明的两条输送带

Champion and Business Case: Two Conveyors of Proof

交易不是由供应商完成的，而是由内部倡导者完成的。底本采用一个行为测试：此人是否为这笔交易做过让自己付出代价的事？在答案为“是”之前，交易只有联系人，没有倡导者。AI 时代的新变化在于，倡导者最有力的武器就是部署本身：拿着幻灯片的倡导者只能争论，拿着二十六天公开指标的倡导者只需指给大家看。

Deals are closed not by vendors but by champions. The source applies a behavioural test: has this person done something for the deal that cost them something? Until the answer is yes, the deal has contacts, not a champion. The AI-era change is that the champion's strongest weapon is now the deployment itself: a champion with a slide deck argues, while a champion with twenty-six days of published gauges on the company's own cases simply points.

图 4-2 商业论证的固定骨架：以买方自身单位表述
Figure 4-2 *The fixed skeleton of the business case, in the buyer's own units*

基线 Baseline	目标工作流当前成本，取自买方数据，而非行业基准	What the workflow costs today, from the buyer's data, not industry benchmarks
机制 Mechanism	部署如何改变该数字，表述为日后用于验证的指标	How the deployment moves the number, stated as the gauges that will verify it
投入 Commitment	买方须提供的案例、权限、专家时间与负责人	Cases, access, expert time and an operator the buyer must supply
回收 Payback	附带置信度的算术；测试集存在之前只是目标	The arithmetic with stated confidence; a target until the suite exists

来源 Source: Cuofano (2026), Ch. IX.

研究发现 FINDING

发现一 *Finding 1*

在 AI 销售中，证明、商业论证与倡导者武装是同一份文件的不同成熟阶段：商业论证预先约定验证指标，证明阶段产出这些指标的读数，倡导者转述这些读数。本发现主要依据机制推演，H1 尚缺乏底本以外的实证检验。

In the AI sale, proof, business case and champion arming are stages of one maturing document: the business case pre-agrees the gauges, the proof produces their readings, and the champion retells them. This finding rests mainly on argument from mechanism; H1 has not yet been tested empirically beyond the source.

第 5 章 · CHAPTER 5

05 发现二：审查关卡由障碍变为筹码

Finding 2: The Gauntlet Turns from Obstacle into Advantage

采购、安全与法务否决的 AI 交易多于竞争对手。买方的锁定意识让这道关卡在一方面更难，在另一方面更容易。

Procurement, security and legal kill more AI deals than competitors do. Capture-aware buyers have made the gauntlet harder in one way and easier in another.

中文

ENGLISH

5.1 更难：锁定审计的到来

Harder: The Capture Audit Arrives

在当前周期的头几年，企业采购逐渐认识到：退出成本会在合作背后不断累积，而供应商构建的工件——测试集、记录、标准——要么成为客户的能力，要么成为供应商的筹码。于是，过去在续约时才出现的问题，如今在第二次会议上就会被提出：工件归谁所有？更换模型后系统能否继续运行？数据如何处理？退出路径是什么？安全团队追问案例流向和模型留存，法务追问智能体行动时由谁承担责任。

In the first years of the cycle, enterprise procurement learned that exit costs compound behind an engagement, and that the artifacts a vendor builds — suites, records, standards — become either the customer's capability or the vendor's leverage. Questions that used to surface at renewal now arrive in the second meeting: who owns the artifacts, can the system survive a model swap, what happens to our data, what is the exit path? Security asks where cases go and what the model retains; legal asks who is liable when an agent acts.

底本附录 B 将此列为 2026 年第三季度的时点事实之一：企业 AI 招标文件越来越多地把所有权、可移植性与退出路径作为标准章节。

The source's Appendix B lists this among its dated facts for Q3 2026: enterprise AI RFPs increasingly carry ownership, portability and exit-path sections as standard schedules.

5.2 更易：诚实答案即竞争武器

Easier: Honest Answers as Weapons

有准备的供应商可以把关卡变成武器，因为这些问题存在大多数竞争者给不出的诚实答案。关键在于**顺序**：主动且尽早提交，这些工件会加速交易；在后期被迫让出，同样的条款就会被视为让步。在合同中承诺“让自己可以被移除”的供应商，给出了风险不对称的买方在别处得不到的承诺。

The prepared vendor can turn the gauntlet into a weapon, because the questions have honest answers that most competitors cannot give. What matters is **sequence**: volunteered early, these artifacts accelerate the deal; extracted late, the same terms read as concessions. A vendor that contractually commits to making itself removable makes the one promise a risk-asymmetric buyer cannot get elsewhere.

表 5-1 审查问题与对应的回答工件
Table 5-1 *Gauntlet questions and the artifacts that answer them*

提问方 Asked by	问题 Question	回答工件 Answering artifact
采购 Procurement	工件归谁所有？ Who owns the artifacts?	主动提交的所有权清单（一页表格） Volunteered ownership schedule (one-page table)
采购 / 架构 Procurement / architecture	是否被单一模型锁定？ Are we locked to one model?	清晰接口：用第二个模型跑冻结测试集 Clean joint: run the frozen suite on a second model
安全 Security	数据去向与模型留存？ Where does data go, what is retained?	部署于客户现场的架构 On-their-floor architecture
法务 Legal	如何退出？ How do we exit?	写入合同的移交验收测试 Handover acceptance test in the contract

来源 Source: Cuofano (2026), Ch. XI and XXI.

5.3 成交：文书追上证明
The Close: Paper Catches Up with Proof

结果销售中的成交不是一个事件，而是一个正在运行的系统的文书追上其证明的时刻。软件时代是先签字后创造价值；结果时代则是楔子的证明先于扩张的签字。双方行动计划从第一次会议就开始执行，列出从证明到生产再到扩张的每一步、双方负责人与日期，使成交成为计划中的最后一个勾选项，而不是季度末的争抢。

- **所有权清单**：结清采购的档案。
- **定价阶梯**：固定费用证明 → 测试集验证后转结果条款 → 产品化后转订阅，转换触发条件写入合同。
- **扩张框架**：在合同中写明评分卡流程，使扩张成为例行活动而非重新谈判。
- **移交测试**：最强的成交加速器。

The close of an outcome sale is not an event but the moment a running system's paper catches up with its proof. In the software era signature preceded value; in the outcome era the wedge's proof precedes the expansion's signature. The mutual action plan runs from the first meeting, listing every step from proof to production to expansion with owners and dates on both sides, so that closing becomes the plan's last checkbox rather than a quarter-end scramble.

- **Ownership schedule**: closes procurement's file.
- **Pricing ladder**: fixed-fee proof, then outcome terms once the suite verifies, then subscription as work productizes — with conversion triggers written in.
- **Expansion frame**: the scorecard process named in the contract, so growth is scheduled, not renegotiated.
- **Handover test**: the strongest close accelerant.

风险提示 CAUTION

折扣纪律 *Discount discipline*

针对已验证回收期所做的每一次折扣，都是在给供应商自己的证明重新定价。需要灵活性时，应交换结构而非价格——更长的期限、更宽的楔子、更早的扩张。

Every discount conceded against a verified payback reprices the vendor's own proof. Where flexibility is needed, trade structure rather than price — a longer term, a broader wedge, an earlier expansion.

第 6 章 · CHAPTER 6

06 发现三：定价迁移与扩张经济学

Finding 3: Pricing Migration and the Economics of Expansion

AI 时代的定价有一条清晰的底层逻辑；朝任一方向偏离它的供应商，都要为错配付出代价。

中文

AI-era pricing has a clean underlying logic, and vendors who price against it, in either direction, pay for the mismatch.

ENGLISH

6.1 归因 × 自主性

Attribution × Autonomy

底本援引实务界的框架，认为定价沿两个轴展开：结果在多大程度上可以归因于系统，以及系统在产出结果时具有多大自主性。归因弱、系统只是辅助人类时，席位制仍然成立；自主性真实存在但归因模糊时，按用量计价——这也是模型供应商自身的收费方式；当系统对可验证的结果负责时，价格附着于结果本身，例如按已解决案例、按交付文件计价，费率可由指标页审计。

Drawing on a practitioner frame, the source argues that pricing follows two axes: how attributable the outcome is to the system, and how much autonomy the system has in producing it. Where attribution is weak and the system assists people, the seat survives. Where autonomy is real but attribution is murky, usage carries the deal — the way model vendors themselves are paid. Where the system owns a verifiable outcome, the price attaches to the outcome — per resolved case or delivered document — at rates the gauge panel makes auditable.

图 6-1 定价形式的归因—自主性矩阵
Figure 6-1 *The attribution–autonomy matrix of pricing forms*

↑ **系统自主性** System autonomy

用量定价 Usage pricing 自主但难归因；消费承诺主导平台层 Autonomous but murky; consumption commitments rule	**结果定价** Outcome pricing 按已验证结果计价，测试集使其可审计 Priced per verified result; the suite makes it auditable
席位定价 Seat pricing 系统辅助人类，价值随用户数增长 Assists humans; value scales with users	**过渡区** Transitional zone 可归因但由人执行；本研究推断，底本未展开 Attributable but human-run; this study's inference

结果归因程度 Attribution of outcome →

来源 Source: Cuofano (2026), Ch. XIII; bottom-right quadrant is this study's inference, not the source's.

结果定价有两个结构性前提。一是**验证**：没有冻结测试集的结果条款只是一份纠纷时间表，因此定价阶梯的每一级都由证明而非谈判解锁。二是**担保**：必须有人为结果兜底，而担保者正是现场部署团队本身——前置部署工程师

Outcome pricing has two structural prerequisites. The first is **verification**: outcome terms without a frozen suite are a dispute schedule, which is why each rung of the pricing ladder is unlocked by proof rather than negotiation. The second is the **guarantee**: someone must stand behind the outcome, and the guarantor is the field motion itself — forward-deployed engineers

使结果定价变得可承保。底本认为，这正是销售者与构建者走向融合的最深层商业原因。

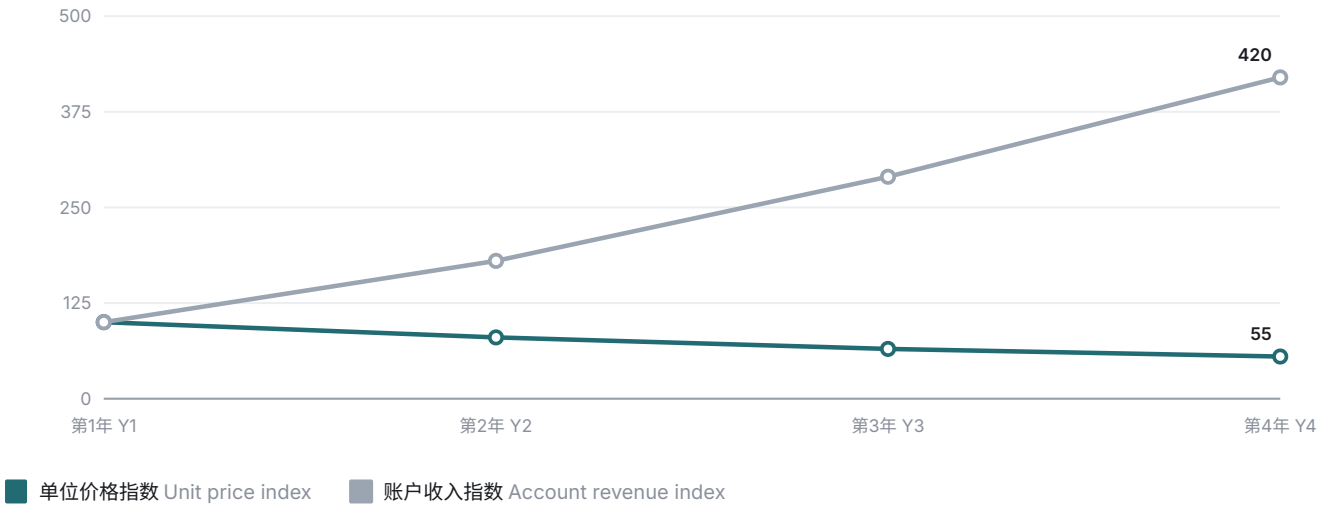

make outcome pricing underwritable. The source sees this as the deepest commercial reason for the convergence of seller and builder.

6.2 为复利定价
Pricing the Compounding

底本最具特色的定价主张是“为复利定价，而非为项目定价”。随着底层能力批发成本下降，每个单位的价格可以下降，而账户收入则因用量增长而上升。诚实的供应商会提前把这条曲线展示给买方，因为这是少有的双方曲线都在改善的定价叙事。下图仅以示意数据描绘这一形态。

The source's most distinctive pricing claim is to price the compounding, not the project. As the wholesale substrate makes each unit cheaper, the unit price can fall while account revenue rises on volume. The honest vendor shows the buyer this curve in advance, because it is the rare pricing story in which both sides' lines improve. The chart below sketches the shape with illustrative numbers only.

图 6-2 单位价格下降与账户收入上升（示意）
Figure 6-2 *Falling unit price and rising account revenue (illustrative)*

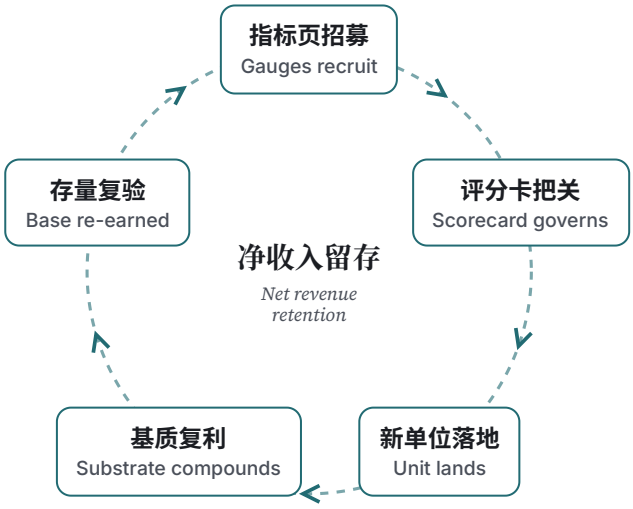

示意 Illustrative: index values invented to show the shape of the mechanism described in Cuofano (2026), Ch. XIII; not measurements.

6.3 扩张：被工程化的增长
Expansion, Engineered

结果销售的经济性在扩张中实现。底本以 Palantir 招股书中“获取—扩张—规模化”的路径为原型：在现场团队了解客户机构期间以低利润甚至负利润获取客户，随部署被证明而扩张，随底层能力成熟而转向软件经济性。因此，首笔交易应依据整条曲线而非自身利润来评估，账户第一年的经济性是一项投资论题，而衡量它的指标是**净收入留存率**。

The economics of the outcome sale live in expansion. The source takes the acquire–expand–scale arc from Palantir's listing documents as its template: acquire at low or negative margin while the field team learns the institution, expand as deployments prove, and scale as the substrate matures into software economics. The first deal should therefore be underwritten against the whole curve rather than its own margin; an account's year-one economics are an investment thesis, and the meter that grades it is **net revenue retention**.

图 6-3 扩张的自我强化机制
Figure 6-3 *The self-reinforcing mechanism of expansion*

来源 Source: Cuofano (2026), Ch. XIV.

底本为扩张设定了两条纪律。其一，随着项目扩大，接触面必须超越最初的倡导者：只存在于单一赞助人预算中的账户，会在一次组织调整中消失。其二，**重新赢得存量**：扩张收入建立在已部署单位之上，而这些单位必须持续通过各自的指标检验，因此账户团队的工作节奏中包含对存量部署的定期复核。由此看来，扩张并非季度业务回顾中的说服结果，而是证明持续公开的自然产物。

The source sets two disciplines for expansion. First, multi-thread beyond the original champion as the programme grows: an account that lives in one sponsor's budget dies in one reorganisation. Second, **re-earn the base**: expansion revenue sits on deployed units that must keep clearing their gauges, so the account team's cadence includes a regular review of the deployed base. Expansion, on this view, is not the product of persuasion at a quarterly business review but the natural by-product of proof that keeps being published.

研究发现 FINDING

发现三 *Finding 3*

定价形式不是谈判结果，而是由证明解锁的阶梯；账户价值不在首笔交易，而在由指标页、评分卡与基质复利驱动的扩张中。被问及续约策略时，底本给出的回答是：“指标页从未停止发布。”

Pricing form is not the outcome of negotiation but a ladder unlocked by proof, and account value lies not in the first deal but in an expansion driven by gauges, scorecards and a compounding substrate. Asked for its renewal motion, the source answers: the gauges never stopped publishing.

第 7 章 · CHAPTER 7

07 案例研究与比较分析

Case Study and Comparative Analysis

本章用三种视角检验前述发现：一个按周重建的综合案例、三个细分市场的参数比较，以及六类失败模式的归纳。

This chapter tests the findings from three angles: a composite case rebuilt week by week, a comparison of three segments, and a classification of six failure families.

中文

ENGLISH

7.1 综合案例：一家保险公司的完整销售

Composite Case: One Insurer, End to End

案例观察 CASE OBSERVATION

案例性质说明 *Nature of the case*

底本附录 C 明确指出，该案例是一个综合构造：“没有真实企业，但每一步都是真实的”。以下数字均为工作示例数字，用于说明机制，而非实测数据。

The source's Appendix C states that this case is a composite: no real firm, every step real. The numbers below are worked-example figures that illustrate mechanisms, not measured data.

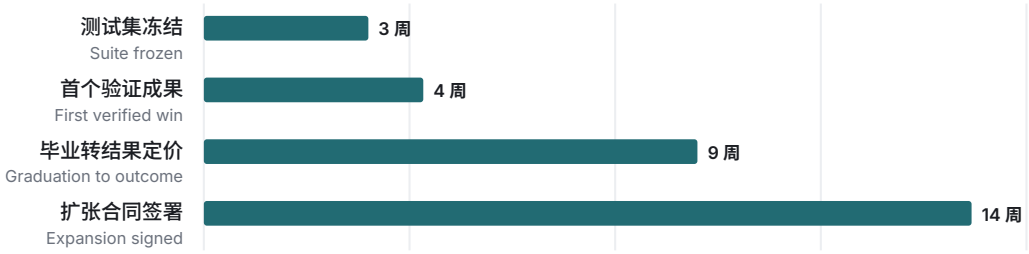

第负八周，供应商的账户评分卡在五家候选客户中把这家保险公司排在首位：每年一万一千件代位追偿案例；数据在客户规则内可达；一位处境停滞但具有影响力的理赔运营副总裁；首席财务官早已跟踪的单案成本；以及一个为有限试点设有快速通道的采购部门。另有三家同业保险公司在观望，构成参考引力。同一名单上的一家“奖杯型”银行因不存在可承受的采购路径而被书面拒绝。

In week minus eight, the vendor's account scorecard ranks the insurer first of five candidates: eleven thousand subrogation cases a year, data reachable within the insurer's rules, a VP of claims operations with standing and a stalled transformation behind her, a cost per case the CFO already tracks, and a procurement office with a fast path for bounded pilots. Three peer insurers are watching — reference gravity. A trophy bank on the same list is declined in writing for lack of a survivable procurement path.

第二周，这位副总裁在未被要求的情况下主动安排了与首席财务官的会面，由此通过倡导者测试。供应商用保险公司自身数字撰写了一页商业论证：基线为每案四十一分钟理赔员时间，目标低于十五分钟，并写明验证指标。采购与安全被提前邀请并收到所有权清单，法务的 AI 问题则由“部署在客户现场”的架构回答。付费、限时的生产楔子合同签署后，采购在十一天内完成审批。

In week two the VP passes the champion test by scheduling the CFO meeting unasked. The vendor writes a one-page business case in the insurer's own numbers: forty-one minutes of adjuster time per case at baseline, a target under fifteen, gauges named. Procurement and security are invited early and receive the ownership schedule before asking, while legal's AI questions are answered by an architecture that runs on the insurer's floor. With a paid, time-boxed production wedge on paper, procurement clears in eleven days.

图 7-1 综合案例的关键里程碑（以证明开始后的周数计）
Figure 7-1 *Key milestones of the composite case (weeks after proof start)*

来源 Source: Cuofano (2026), Appendix C, worked composite (no real firm). First win on day 26, shown as week 4.

第三周冻结测试集，第二十六天取得首个验证成果，当天即发布到首席财务官每周阅读的指标页。倡导者在内部转发时只附了一句话：“我们的案例，我们的标准。”第九周毕业，定价转为按已解决案例计费；两个相邻团队通过公开评分卡提出候选工作流，其中一个通过。第十四周，扩张合同在行动计划的最后一行签署。一年后，净收入留存率为 180%，之前被拒的银行主动来电，并点名引用这家保险公司。

The suite is frozen in week three, and the first verified win comes on day twenty-six, published that afternoon to the gauge page the CFO reads weekly. The champion forwards it internally with one line: our cases, our standard. Graduation in week nine converts pricing to outcome terms per resolved case; two adjacent teams bring candidates through the open scorecard, and one passes. In week fourteen the expansion contract signs on the plan's last line. A year later net revenue retention stands at 180%, and the declined bank calls, citing the insurer by name.

7.2 细分市场比较
Comparing Segments

底本强调，方法只有一套，但参数因细分市场而异，而细分市场设置错误所毁掉的销售计划多于执行失误。向上进入更高层级应以证据为依据：当前层级的参考案例能够延伸到上一层级，且底层能力足以支撑更大客户的单位经济性。过早上移只会换来客户标志，却在无法承受的审查关卡中耗尽资金。

The source stresses that the playbook is one but its settings vary by segment, and that mis-set segments kill more sales plans than poor execution. Moving upmarket should follow evidence: when the current tier's references carry into the next, and when the substrate is mature enough for the bigger account's unit economics to hold. Moving up early buys logos and burns runway in gauntlets the firm cannot survive.

表 7-1 三个细分市场的销售参数
Table 7-1 *Sales settings across three segments*

参数 Setting	中端市场 Mid-market	大型企业 Large enterprise	战略客户 Strategic tier
交易规模 Deal size	六位数中低段 Low-to-mid six figures	六位数高段至七位数中段 High six to mid seven figures	多年期八位数 Eight figures over years
周期 Cycle	1–2 个季度 1–2 quarters	2–4 个季度，受关卡主导 2–4 quarters, gauntlet-led	多年 Multi-year
干系人 Cast	3–5 人，决策者常兼倡导者 3–5; buyer often the champion	完整五角色，乘以事业部数 Full five, times business units	机构而非委员会 An institution, not a committee
制胜定位 Winning position	以速度获得验证价值 Speed to verified value	证明加集成 Proof plus integration	伙伴关系与能力建设 Partnership, capability building

来源 Source: Cuofano (2026), Ch. VI.

7.3 六类失败模式
Six Failure Families

表 7-2 失败模式、症状与结构性修复
Table 7-2 *Failure families, symptoms and structural fixes*

失败模式 Family	典型症状 Symptom	结构性修复 Structural fix
演示陷阱 Demo trap	无冻结标准即开始试点 Pilot begins with no frozen standard	无测试集不进入证明 No proof phase without the suite
试点炼狱 Pilot purgatory	延期取代里程碑 Extensions replace milestones	付费限时楔子，写明毕业日期 Paid, time-boxed wedge with graduation date
单线依赖 Single thread	倡导者离任，交易蒸发 Champion leaves, deal evaporates	多线接触作为阶段门槛 Multi-threading as a stage gate
采购伏击 Procurement ambush	法务周期增至三倍 Legal cycles triple	提前提交所有权清单等工件 Ownership artifacts, early
折扣螺旋 Discount spiral	客户学会等到年底 Account learns to wait for December	用指标页捍卫价格 Defend price on the gauge page
扩张假设 Expansion assumption	扩张变成买方主导的重谈 Expansion becomes buyer-led renegotiation	合同写明扩张评分卡流程 Cascade scorecard named in contract

来源 Source: Cuofano (2026), Ch. XVII (composite failures).

核心洞见 KEY INSIGHT

共同根源 *A shared root*

六类失败都有同一个根源：销售的某一部分依靠断言运行，而时代要求的是工具。这与第二章提出的分析框架完全一致。

All six families share one root: some part of the sale ran on assertion where the era demands an instrument. This matches the analytical framework set out in Chapter 2.

第 8 章 · CHAPTER 8

08 讨论：组织启示、局限与风险

Discussion: Organisational Implications, Limitations and Risks

如果证明就是部署，那么销售组织必须围绕证明能力而非线索数量来设计。本章讨论这一推论，并审视底本论证的边界。

If proof is deployment, the sales organisation must be designed around proof capacity rather than pipeline volume. This chapter discusses that implication and examines the limits of the source's argument.

中文

ENGLISH

8.1 组织启示：以小组为单位

Organisational Implication: The Pod

底本认为，新销售组织的基本单位是“小组”而非个人销售代表：一名客户经理负责商业主线——账户论题、倡导者、审查关卡与合同；一名前置部署工程师负责证明；另配若干按需投入的专家。分工十分明确：客户经理出售部署，工程师就是部署。缺乏商业能力的构建者会陷入无定价的英雄主义，缺乏构建能力的销售则只是一个背着配额的演示团队。

The source argues that the basic unit of the new sales organisation is the pod, not the rep: an account executive owning the commercial thread — account thesis, champion, gauntlet, paper — paired with a forward-deployed engineer owning the proof, plus fractional specialists as needed. The division is exact: the AE sells the deployment; the FDE is the deployment. A builder-led motion without commercial craft drifts into unpriced heroics, and a seller-led motion without build capacity is a demo team with quota.

由此带来三项推论。其一，人员比例倒转：构建者多于销售者，因为收入的约束是证明能力而非线索生成。其二，薪酬跟随销售对象：只按签约计提佣金会重现软件时代签下无法证明之交易的激励，因此应按定价阶梯支付——证明费用、结果转换、扩张与净留存。其三，招聘与上岗以工具认证代替跟岗学习：前九十天须完成账户评分、商业论证、证明方案与模拟采购等实操，通过后才分配配额。

Three corollaries follow. First, the ratio inverts: more builders than sellers, because the constraint on revenue is proof capacity, not pipeline. Second, pay follows the object of the sale: commission on signature alone recreates the software era's incentive to close unprovable deals, so pay runs against the ladder — proof fees, outcome conversion, expansion and net retention. Third, hiring and ramp become certification on the instruments rather than shadowing: in the first ninety days a seller must pass exhibits — an account scorecard, a business case, a proof plan, a mock procurement — before quota arrives.

图 8-1　评价销售动作的六个指标
Figure 8-1　*Six meters that grade the motion*

证明转化率 Proof conversion	毕业进入生产的证明占比，同时审计选客与证明设计	Share of proofs that graduate; audits selection and design at once
至证明周期 Cycle-to-proof	从首次会议到首个验证成果的天数	Days from first meeting to first verified win
结果交易占比 Outcome-deal share	按结果或用量而非席位计价的收入比例	Revenue on outcome or consumption terms, not seats
净收入留存 Net revenue retention	扩张机制的成绩单，复利论题的核心数字	The expansion machine's grade
小组产出 Pod productivity	按小组而非个人计量的收入	Revenue per pod rather than per rep
折扣完整性 Discount integrity	实际价格与指标验证价值之比，及早发现折扣螺旋	Realised price against verified value; catches the spiral early

来源 Source: Cuofano (2026), Ch. XXIII.

与这六个指标并列的是“拒绝日志”：被拒绝的奖杯客户、未设门槛的试点、以席位定价的智能体交易。同样重要的是被排除在外的指标——线索总量、演示次数与活动量，在底本看来它们衡量的是当前时代不再为之付费的动作。

Alongside the six meters sits the refusal log: trophies declined, ungated pilots refused, seat-priced agent deals walked away from. Equally telling is what is excluded — pipeline volume, demo counts and activity metrics, which the source regards as measuring motion the current era no longer pays for.

8.2 研究局限
Limitations

- **证据性质**：底本自述其账户门槛、倡导者机制、商业论证骨架等内容属于“方法陈述”，未经系统实证；本研究的发现因此主要是机制层面的。
- **案例构造**：核心案例为综合构造，其数字不能用于估计效应大小。
- **样本偏向**：公开记录中的典型企业（如 Palantir、ServiceNow）属于成功者，可能存在幸存者偏差。
- **时点性**：附录 B 的读数注明为 2026 年第三季度，底本预期会被后续版本取代。

- **Nature of evidence**: the source states that its account gates, champion mechanics and business-case skeleton are method, not systematically tested; the findings here are therefore mainly mechanistic.
- **Constructed case**: the central case is a composite, and its numbers cannot be used to estimate effect sizes.
- **Sample bias**: the firms in the public record (such as Palantir and ServiceNow) are winners, which raises survivorship bias.
- **Timeliness**: Appendix B's readings are dated Q3 2026 and the source expects them to be superseded.

8.3 风险
Risks

风险提示 CAUTION

结果定价的风险转移 *Risk transfer in outcome pricing*

结果定价把交付风险转移给供应商，要求现场团队有能力担保结果。若前置部署能力的扩张慢于销售扩张，供应商可能签下无法承保的结果条款。此外，结果计量依赖测试集的代表性；若测试集偏离真实案例分布，指标页可能在“全绿”中掩盖价值流失。

Outcome pricing shifts delivery risk to the vendor and requires a field team able to guarantee results. If forward-deployed capacity grows more slowly than sales, a vendor may sign outcome terms it cannot underwrite. Outcome measurement also depends on how representative the suite is; if the suite drifts from the real case mix, an all-green gauge page can hide value leakage.

第 9 章 · CHAPTER 9

09 结论与未来研究方向

Conclusions and Future Research Agenda

AI 时代最难的销售，可以成为最诚实的销售——前提是用工具取代断言。

The era's hardest sale can become its most honest one — provided instruments replace assertion.

中文

ENGLISH

9.1 主要结论

Main Conclusions

本研究对四个研究问题的回答可以概括如下。关于证明：演示已不再携带信息，有效证明是在买方案例上、按买方专家签字的标准、在限定时间内完成的付费生产部署。关于审查关卡：锁定意识使采购问题提前出现，但主动提交所有权清单、可替换模型的证明与移交测试的供应商可以把关卡变为优势。关于定价：定价形式由归因与自主性决定，并由证明逐级解锁，账户经济性在扩张中实现。关于组织：销售单位从个人转向小组，薪酬与度量围绕证明能力重建。

The study's answers to its four questions can be summarised as follows. On proof: demos no longer carry information, and valid proof is a paid production deployment on the buyer's cases, against a standard the buyer's expert has signed, on a clock. On the gauntlet: capture-awareness brings procurement questions forward, but vendors who volunteer ownership schedules, model-swap evidence and handover tests can turn the gauntlet into an advantage. On pricing: form is set by attribution and autonomy and unlocked rung by rung through proof, with account economics realised in expansion. On organisation: the selling unit moves from rep to pod, and pay and metrics are rebuilt around proof capacity.

贯穿这些结论的是同一个机制：在风险不对称的市场中，能够把买方风险转化为可检验工具的一方获得成交。底本最后指出，无论 AI 下一步自动化什么，这一结构都不会改变——证明仍然在生产中，价格仍然跟随验证，买方的风险仍然是销售真正的对手。

One mechanism runs through all of these conclusions: in a risk-asymmetric market, the side that can convert the buyer's risk into checkable instruments wins the deal. The source closes by arguing that whatever AI automates next, this structure will hold: proof will still be production, price will still follow verification, and the buyer's risk will remain the sale's true opponent.

> **用工具去销售，这个时代最难的销售就会成为最诚实的销售。**
>
> *Sell with instruments, and the era's hardest sale becomes its most honest one.*
>
> — Cuofano, Enterprise Sales (2026), Epilogue

9.2 未来研究议程

Future Research Agenda

1. **检验 H1 与 H4**：收集多家供应商的证明转化率与至证明周期数据，比较生产楔子与传统试点、小组结构与个人结构的差异。
2. **检验 H2**：以招标文件中的所有权与退出章节为样本，测量主动提交所有权清单对采购周期的影响。

1. **Test H1 and H4**: gather proof-conversion and cycle-to-proof data across vendors, comparing production wedges with classic pilots and pod with rep structures.
2. **Test H2**: using the ownership and exit sections of RFPs, measure how volunteered ownership schedules affect procurement cycle length.

3. **检验 H3**：比较结果定价与席位定价账户的净收入留存，并控制行业与规模。
4. **测试集代表性**：研究测试集漂移如何影响结果计量与合同纠纷。
5. **买方视角**：从采购方研究锁定审计的制度化过程，以及它对供应商市场结构的反作用。

3. **Test H3**: compare net revenue retention of outcome-priced and seat-priced accounts, controlling for industry and size.
4. **Suite representativeness**: study how suite drift affects outcome measurement and contract disputes.
5. **The buyer's view**: study, from the procurement side, how the capture audit is institutionalised and how it feeds back into vendor market structure.

研究发现 FINDING

总体判断 *Overall judgement*

底本的四条命题在机制上自洽，并与公开记录中的方向性证据一致，但尚未经过系统检验。本研究建议把它们视为可操作的工作假设：实践者可以采用，研究者应当检验，而两者都应按底本的要求在后续周期中重新读数。

The source's four claims are internally consistent at the level of mechanism and agree with the directional evidence of the public record, but they have not been systematically tested. This study recommends treating them as working hypotheses: practitioners may adopt them, researchers should test them, and both should re-take the readings in later cycles, as the source itself asks.

参考文献与研究说明 *References & Research Notes*

研究说明 *Note on Method and Sources*

本研究是对底本《Enterprise Sales — Selling Outcomes in the AI Era》（Cuofano，2026 年 8 月第一版）的分析性解读，而非翻译或摘要。文中的机制、框架与案例均来自底本，经重新组织与论证；底本所给的数字为其标注于 2026 年第三季度的时点读数或“工作示例”（作者明确说明该保险案例为综合构造、并非真实企业），本文在图表注释中逐一标明。凡标注“示意 / illustrative”的数据仅用于说明机制形态，不代表实测值。底本中的大部分模式以“方法”形式陈述并附有可证伪条件，本研究将其作为待检验假设，而非既定事实。

This study is an analytical reading of the source volume, Enterprise Sales — Selling Outcomes in the AI Era (Cuofano, first edition, August 2026), not a translation or summary. Its mechanisms, frameworks and cases come from the source and have been reorganised and argued afresh. Figures are either the source's dated readings as of Q3 2026 or numbers from its worked composite (which the author states is no real firm), and each chart note says which. Data marked illustrative (示意) only shows the shape of a mechanism and is not a measurement. Most of the source's patterns are stated as method with falsifiers; this study treats them as hypotheses to be tested, not as established fact.
